

Advanced Search Operators Cheat Sheet

GOOGLE	BING	RESULT
cache:		Shows the version of the webpage from Google's cache.
	contains:	Finds webpages that contain links to a particular type of file (in Bing). Example: <i>site:yourdomain.com contains:pdf</i> returns pages on your site that have a link to a PDF file.
ext:	ext:	Returns only webpages with the file extension you specify (such as htm). Note: Bing may not produce reliable results, per our tests.
filetype:	filetype:	Finds results of a single type only (such as pdf).
	info:	Presents some information that Bing has about a webpage such as related pages from the site, external pages talking about the webpage, and related results.
intext:		Shows pages that contain a specific word in their body text.
intitle:	intitle:	Finds pages that include a specific word as part of the indexed title tag.
allintitle:		Finds pages that include all query words as part of the indexed title tag.
inurl:		Finds pages that include a specific keyword in their indexed URLs.
allinurl:		Finds a specific URL in the search engine's index. Also can be used to find pages whose URLs contain all the specified words.
	inanchor:	Finds webpages that use a specified keyword as anchor text in a link.
	inbody:	Finds webpages that use a specified keyword in its body section.
related:	related:	Finds webpages that are similar to the specified webpage. Example: <i>related:yourdomain.com</i> shows what the engine considers similar to your homepage.
site:	site:	Restricts the search to pages within a particular domain and all its subdomains. Example: <i>site:yourdomain.com</i> shows approximately how many pages the search engine has indexed for your site.
*	*	Acts like a wildcard that can take the place of any word or phrase. Example: <i>tallest * in the world</i> finds results about various tallest things.
-	-	Excludes results that contain the word following the minus sign. Place this operation at the end of your search query. Example: <i>cats -musical</i> finds pages about the animal, not the show.
" "	" "	Finds instances of the exact text within the quotation marks everywhere it appears in the search engine's index. Example: <i>"long string of text from your site"</i> finds pages that have duplicate content.
